Basic:

1. Retrieve the total number of movies in the dataset.

2. Calculate the total revenue generated from all movies.

3. Identify the highest-grossing movie.

4. Identify the most common genre in the dataset.

5. List the top 5 highest-rated movies along with their ratings.

Intermediate:

1. Determine the distribution of movie releases by year.

2. Join relevant tables to find the average rating of movies in each genre.

3. Group the movies by director and calculate the average revenue generated by each director's movies.

4. Determine the top 3 actors who have appeared in the most movies.

Advanced:

1. Calculate the percentage contribution of each genre to total box office revenue.

2. Determine the top 3 highest-grossing movies for each genre.
